

Scenario:

You are a college student who is struggling to drink the proper amount of water to avoid dehydration. You recently decided that you were going to find an app to help remind you to drink a healthy amount of water each day.

Task 1: Create a profile and add friends to see how much water they are drinking each day.

Task 2: Add the amount and what you were drinking to your profile. Try to fill up the bottle!

Task 3: Buy a pair of leggings and a water bottle from the shop.

Notes:

What changes we should make:

- Add a feature to see the top rated drinks among friends
- Update the shop and payment methods
- Create better aesthetic for home screen

What we should keep the same:

- Ability to see what friends are drinking and how much
- Keep the rating system on each drink added
- Water bottle graphic
